

Georgia: Migration, a main risk towards sustainable demographic future

Joseph Salukvadze & Giorgi Meladze Tbilisi State University

Dynamics of population number in Georgia during 1990-2013

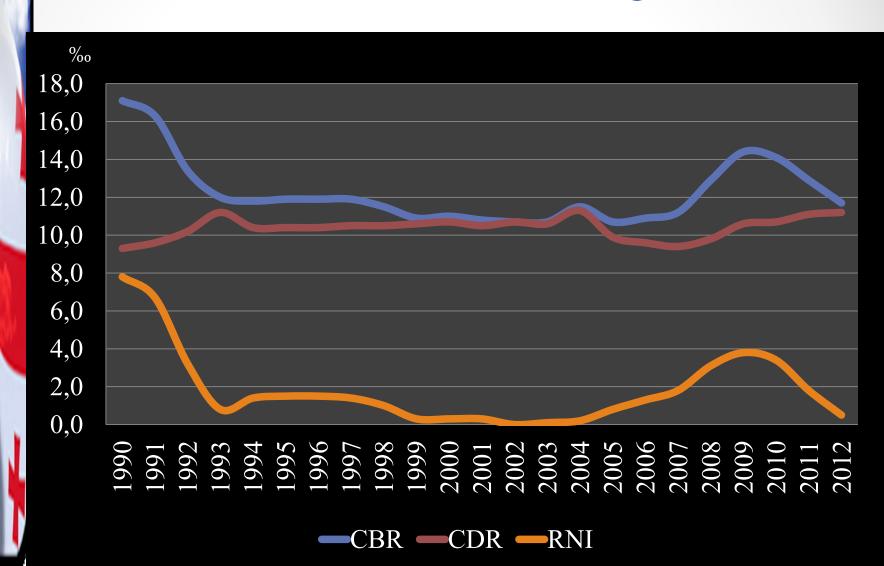

Comments #1

- According to data of the National Statistical Service of Georgia (Geostat) the process of population decline was permanent between 1992 and 2004.
- In the specified period the total population number declined almost by 20%. Such a decline took place mainly among population in active reproduction (20-29 years) and working ages (15-64).
- The rate of realization of fertility potential declined from 36.6% in 1989 to 25.5% in 2002.

Dynamics of birth, death and natural increase rates in Georgia

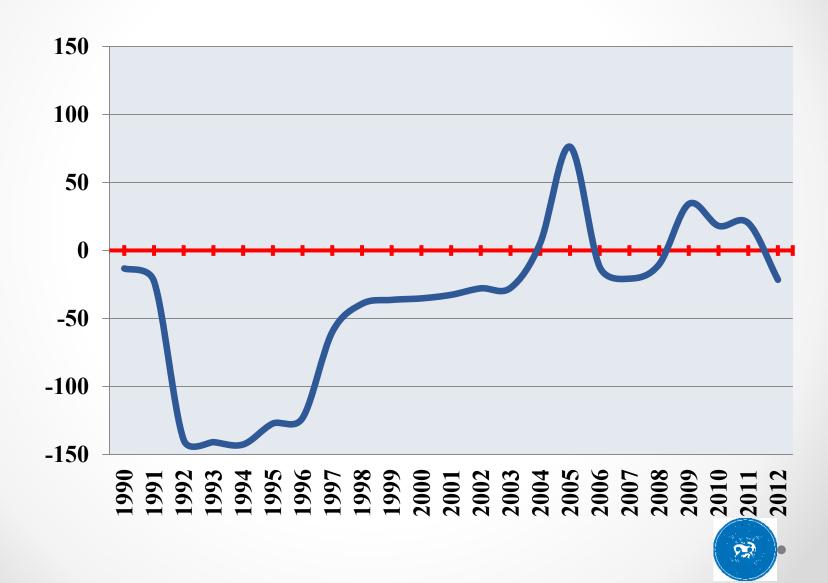

Comments #2

• The process of decrease of birth numbers and wide-scale emigration from Georgia, strongly determines a growth of population aging index.

• In 2008 Georgia ranked 14th among 25 demographically most aged countries worldwide. According to 2013 data the share of persons of 65 and older is almost 14%.

The World's 25 Oldest Countries: 2008 (Percent of population aged 65 years and over) 21,6 Japan 20,0 Italy 20,0 Germany 19.1 Greece 18,3 Sweden 17,9 Spain 17,7 Austria 17,6 Bulgaria 17,6 **Estonia** 17,5 **Belgium** 17,4 Portugal 17,0 Croatia 16,9 Latvia 16,6 Georgia 16,6 **Finland** 16,3 France 16,3 Slovenia 16,1 Ukraine 16,0 Inited Kingdom 16.0 Switzerland 16,0 lithuania 15,7 Denmark 15,6 Hungary 15,2 Serbia 15,0 Norway 0,0 5.0 10.0 15,0 20.0

Net Migration

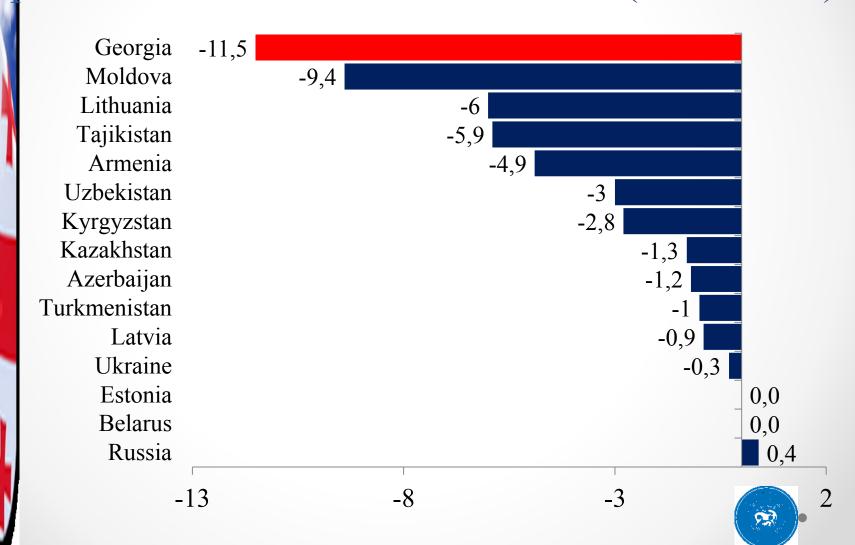

Due to the above-described circumstances, the fixation of positive migration balance in years 2004, 2005, 2009-2011 causes certain doubts. These doubts are strengthened by studies of UN experts who report on a negative average annual external migration balance comprising 30,000 persons in Georgia in the years 2005-2010. The same source indicates even higher negative average annual migration balance during 2000-2005, counting at 62,000 persons.

Conclusions

Migration has served as a main reason for deterioration of demographic situation/population composition (age-sex structure, fertility rate, aging, etc.) from the 1990s.

The resolving of negative migration processes are possible only through radical betterment of economic conditions (esp. employment) and overall improvement of social background in the country.

The elaboration and implementation of efficient/active migration policies are absolutely crucial for reversing negative migration trends.

This objective requires an active and fruitful international cooperation with countries (including V4) and agencies (e.g. IOM, UNHCR) that are experienced in good governance of migration processes.
